<u>ABSTRACT</u> – <u>Kalappa</u>

It is a website that can be implemented for getting better results in the area of agriculture. It is a medium by which farmers can place orders for high quality fertilizers and manures and can get them through the mediator ship of the portal. In case of fertilizer delivery, the farmer only needs to pay upon delivery if the account has not yet been digitalized. It also includes a forum where different farmers can place their view s on different successful techniques implanted by them. Another important feature is that the administrator frequently keeps on updating different farming methods and techniques that can be implemented and also give details about different dos and don'ts.   The system provides information's about farming tools/resources to the public (like tractors etc.). So, the members can give requests for the tools/resources and it can be allotted based on priorities in a queue system. Through this method, improved farmi ng is possible through optimum use of internet.
